

Air Roll Lock

Differential Shaft

No slip, no wobble, no dusting, no kidding

Eliminating many common issues associated with differential winding Converttech's Air Roll Lock Differential shaft is easy to use and highly versatile. A patented internal locking mechanism precisely controls core grip and web tension ensuring perfect rolls even with sensitive web materials. Loading and unloading is easier than ever before. No hammers, no hitting, and no spacers; rolls simply slide on and off along the length of the shaft with only a light push from the operator. Call today for a free video of Converttech's Air Roll Lock Differential shaft in action.

- 3" and 6" diameters
- Face lengths to 150"
- Slits from 1" wide and up
- Tensions from under .25 PLI
- Slip is internal which means:
 - No core dust
 - No side to side movement
 - No core wobble
- Patented design
