

# Knife

## Expanding Shaft

### Precision slitting and tight tolerance cuts

Chrome plated ground steel and urethane lugs ensure a tight grip for bottom knives or anvils. Unlike traditional grooved shafts flexible yet precise configurations for slitting applications are possible with Converttech's steel Knife shaft. Knives can be used anywhere along the shaft body and, once configured, the anvils or bottom knives are firmly held in place with the pneumatic expansion of the urethane lugs. Available in diameters from 70MM to 6 inches and face lengths up to 150 inches.

#### Knife Shafts:

- 70 MM to 6" diameters
- Face Lengths to 150"
- Precision ground chrome plated steel bodies
- Dynamic balancing available
- Urethane lugs to assure grip of all anvils or bottom knives
